

The Digital Engagement Economy Platform

A platform company spanning consumer attention, media reach and Web3 transaction infrastructure — built across gaming, media and digital-asset services.

Company Overview

Abu Dhabi (ADGM), UAE | June 2026

Three billion consumers, one digital economy

GenZ and Millennial consumers game, trade crypto, consume digital media and move money online — often in the same session. They behave as one connected market rather than separate gaming and crypto audiences.

Today: point solutions

- A gaming studio here. A crypto exchange there.
- A news site somewhere else.
- A marketing agency with no audience.
- Payment infrastructure with no users.
- Each one serves a single corner of the market.

Simple Tech connects them

Capturing attention needs consumer products; monetising it needs business products. Simple Tech operates both sides of the market and links them into one platform.

The consumer who was always both — gamer and crypto user — finally has one platform built for them.

A dual-sided platform

CONSUMER SIDE

We own attention at scale

Gaming and digital-media products that capture and retain GenZ / Millennial users — a large, engaged, digitally-native audience.

BUSINESS SIDE

We own the infrastructure Web3 needs

B2B products that serve the Web3 ecosystem: software, payment rails, media reach, marketing and user acquisition — under one relationship.

The reward-loop engine connects the two sides

Consumer users become a delivery channel for business clients: a player discovers a Web3 project inside a game, arrives engaged, and converts. Owning both sides at once is what makes it work.

Two sides of one platform

Consumer products that own attention. Business products that monetise it.

CONSUMER SIDE

We own attention at scale

- › Casual mobile games studio
- › iGaming platform
- › Daily fantasy sports (DFS) platform
- › Mobile gaming app
- › Gaming content platform
- › Crypto news & media network
- › Crypto education platform

BUSINESS SIDE

We own the infrastructure Web3 needs

- › Web3 payment-software developer
- › Web3 marketing agency
- › On / off-ramp SaaS platform
- › Payment processing platform
- › Digital-asset trading platform
- › B2B game-development studio

Scale that already exists

A profitable platform with global reach — built over years of operating, not a launch-stage concept.

The reward-loop engine

Reward loops embedded in our games connect players to Web3 projects built on our infrastructure. A player completes an in-game challenge, earns a reward, and arrives at the project already engaged rather than cold.

Not Web3 gaming

Earlier Web3 games built financial mechanics into gameplay and lost players; most are now gone. We keep the games as games. Crypto discovery is a reward layer above the game — connected at the distribution layer, not the product layer.

Why it is hard to copy

It works only because we own the games, the audience, the infrastructure and the business relationships at once. Assembling all four takes years — and few companies have done it.

Margin expansion through shared functions

The businesses are profitable independently. Bringing them onto one platform adds margin the standalone companies cannot generate alone.

1

Internal marketing

The owned marketing agency becomes the growth engine for every asset — external acquisition cost becomes internal margin.

2

Payment-rail recapture

Gaming and iGaming pay 2–4% to third-party processors. Routing through owned rails recaptures that margin at scale.

3

Cross-portfolio reach

A user from any asset is reachable across all of them at low marginal cost — improving unit economics without new products.

4

Shared infrastructure

Technology, compliance, finance and operations are shared; each new business integrates at incrementally higher margin.

Five reinforcing flywheels

The businesses connect into five flywheels, where activity in one supports the others — so the platform compounds in value as it scales.

1 Reward Loop

More games → bigger audience → more valuable to business clients → more revenue → better games.

2 Media Credibility

More clients launch → our media covers them → traffic grows → media more valuable to the next client.

3 Data Intelligence

More users → richer cross-vertical data → better targeting and cross-sell across every product.

4 Payment Infrastructure

More clients use our rails → more volume → better economics → more competitive → more clients.

5 Developer Network

More clients build on us → we become the default infrastructure → more developers choose us.

Building through the down cycle

As crypto sentiment falls, speculative businesses close and profitable ones come to market at lower prices. Simple Tech is assembling the platform while others are stepping back.

Real businesses

cash flows from gaming, media,
software, services and payments — not
token prices

Lower entry cost

profitable assets available at
distressed prices today

A patient buyer

valuation discipline on every deal,
integration over hype

Our model does not depend on a price recovery — when sentiment turns, it is upside rather than a requirement.

Operators who have done this before

The founding team has built consolidation platforms before — a 13-acquisition gaming rollup at Oneverse, and a 30-brand e-commerce rollup at eBrands.

Prashanth Joshua

FOUNDER

IIT Kharagpur. Ex-Microsoft and Head Digital Works. Founded Oneverse Gaming. Leads M&A and portfolio strategy.

Jonne Vaelilae

CO-FOUNDER · HEAD OF WEB3

Entrepreneur for 15+ years and crypto investor and educator since 2018. Co-founded eBrands, an e-commerce serial acquirer (30 brands, \$60M+ raised), and Web3 firm Wealthrone.

E. Paul Micheal

CO-FOUNDER · HEAD OF GAMING

Former head of operations at Partypoker, the world's largest online poker platform at its peak. Led operations and post-merger integration at Oneverse.

Suhas Kundapoor

CAPITAL MARKETS

Columbia University. 25+ years in institutional capital markets; structured over \$3B in private equity and project finance.

Work with us

Media

The thesis, the team and the market shift — we're happy to talk on the record.

Partners & advisors

Web3 projects, vendors and advisors who want to plug into the platform.

Leaders

Operators who want to help build the platform for the digital engagement economy.
